

LET US CHOOSE

**More of the same pollution and traffic congestion --
or a better way through high speed rail?**

Stop Big Oil from killing High Speed Rail!

For over a decade, the State of California has prepared a route for a European-style bullet train network. In 2008, you are supposed to vote to approve a \$10 billion bond to build the first leg of the system -- a 220-mph train that will travel from LA to San Francisco in less than three hours.

But too many of our politicians, often the same ones who sell themselves as environmentalists and transportation advocates, take millions from big oil. Now they are doing their bidding and quietly trying to kill the project before you can vote on it.

High Speed Rail works.
It's been running in Europe and Asia for over four decades.

The trains run on electricity - not fossil fuels.
That means less pollution and reduced dependence on foreign oil

**Call or write to your representatives.
Tell them to back High Speed Rail!**

Friends of High Speed Rail
A volunteer group made up of people just like you: people who want an alternative to traffic.
